NATIONAL
Chainless Bicycles

About two years ago, we began experimenting upon chainless bicycles, but it was not till midsummer of 1900 that we brought out our finished machine. Notwithstanding that the construction was all new and practically untried in actual service, the National Chainless was a success from the start. Like all other Nationals, they have an individuality all their own—there are no others like them. They are exclusively of our own design.

The sale of the 1900 chainless far exceeded our expectations, and for this season we have increased the line of chainless models to four, by the addition of the cushion frame models. Coaster brake hubs of our own design may be fitted when desired.

The combination of the chainless, cushion frame and coaster brake features in one bicycle makes a machine which is winning back to the ranks of riders many who had given up the use of the bicycle.

In so brief a pamphlet, it is impossible to illustrate the special features of these machines, but a request will bring you a catalogue with full information.

OTHER NATIONALS

The full line of Nationals is made up of eleven models, ranging in prices from $40.00 upwards. Full roadsters, light roadsters, racing machines, cushion frame chain wheels, and the chainless bicycles with both rigid and cushion frames, are included. To any of them coaster brakes may be fitted. Only the highest class of equipments are used. Options are many and varied, so that every rider's requirements may be supplied.

The special features in National Bicycles have made them what they are. The handle bar and seat post binders, chain adjuster and crank hanger construction are all of own design. We make all of the parts in our own factory, and as our policy has always been to make good bicycles only, the purchaser can safely depend upon any National which he may purchase being made from the best materials and by the best skilled workmen.

Every rider figures either on the saving or pleasure he will get from the use of his bicycle. To be able to obtain the best results, he must have a machine which is so made as to be easily adjusted and taken care of by himself, and of a quality which will give him continuous service without repeated recourse to a repair shop.

Any National will give this satisfactory service, and while their first cost may be a little more than that of some other makes, it is well to remember that "what you get for your money is as important as the amount you pay."

We will be pleased to give you full information on receipt of request.
